Project Design Phase-I
Problem – Solution Fit Template

Date	28 October 2026
Team ID	SKILLWALLET-EV-01
Project Name	Electric Vehicle Market Performance & Insights
Maximum Marks	2 Marks

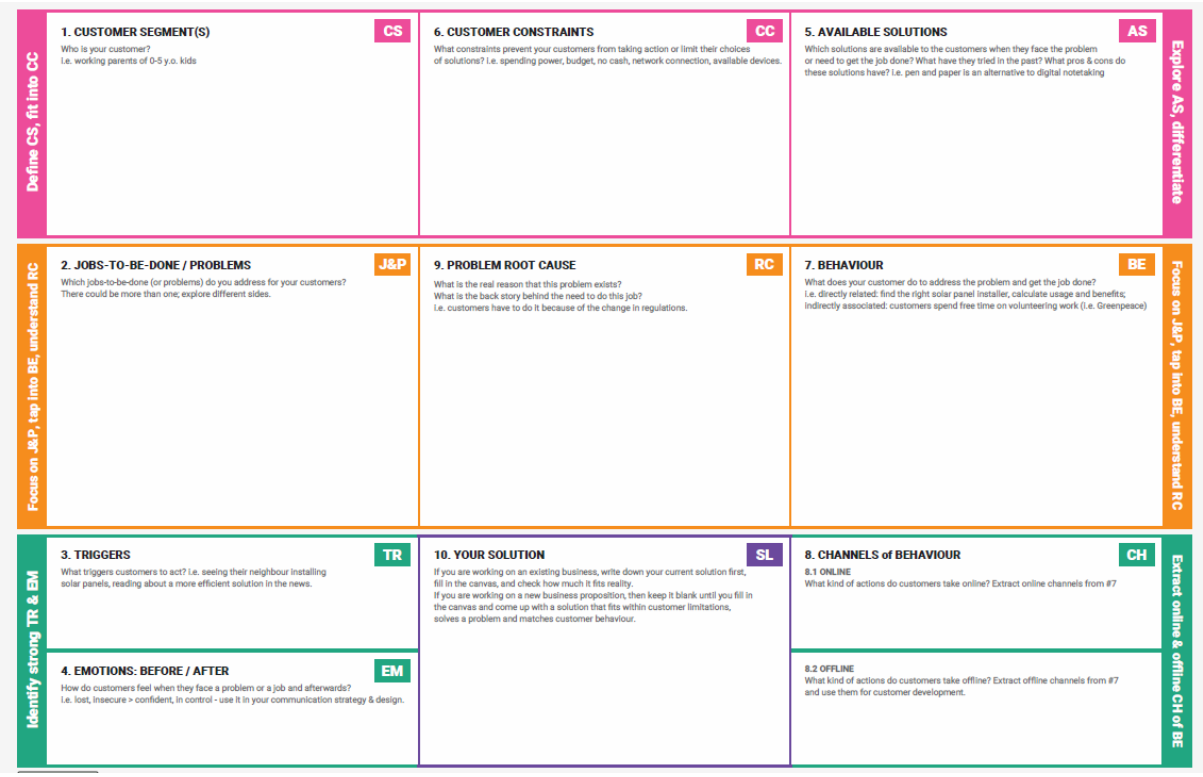

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why

Purpose:

- ❑ Solve complex problems in a way that fits the state of your customers.
- ❑ Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- ❑ Sharpen your communication and marketing strategy with the right triggers and messaging.
- ❑ Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- ❑ **Understand the existing situation in order to improve it for your target group.**

Section	Canvas Element	Project Specifications & Findings
1. Customer Segment (CS)	Target Users	1. Prospective EV retail buyers & fleet managers. 2. Automotive R&D analysts and product strategists. 3. Environmental policy makers and energy regulators.
2. Jobs-To-Be-Done (J&P)	Customer Problem & Tasks	Evaluate driving range reliability, compare fast-charging downtime, evaluate 3-year resale values, and quantify total emissions savings.
3. Triggers (TR)	Catalysts to Action	High fuel prices, government green subsidies, corporate sustainability mandates, and the launch of new EV battery technologies.
4. Emotions (EM)	Before vs. After	Before: Range anxiety, high upfront cost skepticism, uncertainty over battery degradation. After: Confident, informed, data-backed vehicle selection and clear ROI expectations.
5. Available Solutions (AS)	Existing Alternatives	Scattered OEM brochures, static automotive spreadsheets, and unstandardized third-party review blogs (lack comprehensive cross-comparison).
6. Customer Constraints (CC)	Barriers to Purchase	Budget constraints, limited home-charging infrastructure, and fear of rapid battery degradation over 5 years.
7. Behaviour (BE)	User Research Actions	Spending hours comparing spec sheets across dozens of manufacturer websites, reading car forums, and test driving without technical clarity.
8. Channels of Behaviour (CH)	Online / Offline Channels	Online: Automotive portals, manufacturer configurators, YouTube reviews. Offline: Dealership visits, auto expos, and word-of-mouth recommendations.
9. Problem Root Cause (RC)	Why the Problem Exists	Lack of a unified, interactive BI analytical tool capable of correlating multidimensional EV attributes (range, battery

		chemistry, pricing, resale value).
10. Your Solution (SL)	Implemented Solution	An interactive Tableau & Flask Web Analytics Dashboard providing 9 multi-metric visualizations, real-time filters, and complete lifecycle insights across 100k EVs.
